ENVIRONMENTAL POLICY

Raahen Terästuote Oy

Raahen Terästuote Oy manufactures steel structures, cuts and press-brakes steel, and installs and maintains industrial structures. The most significant environmental impacts of our operations arise from energy use, welding and cutting, the use of materials and waste, and transport. We are committed to the following principles:

1. **Compliance.** We comply with environmental legislation and our customers' environmental requirements. Environmental requirements are reviewed at the start of every new project.
2. **Monitoring and reducing emissions.** We calculate our greenhouse gas emissions annually (Scope 1–3) and aim to reduce them. The electricity we use is emission-free, and its origin is verified by guarantees of origin.
3. **Efficient use of materials and energy.** We nest the parts to be cut on the plates so as to keep waste to a minimum. Steel scrap is sent for recycling. We use energy efficiently.
4. **Waste and chemicals.** We sort our waste and send hazardous waste for appropriate treatment. Chemicals are handled in accordance with their safety data sheets, which are available in the production facilities.
5. **Dust and fumes.** Welding and cutting fumes are controlled by local exhaust ventilation and filtration.
6. **Procurement and transport.** We take environmental aspects into account when selecting suppliers and planning transport.
7. **Personnel.** We provide our personnel with induction in environmental matters. Everyone is responsible for complying with this policy in their own work.
8. **Continual improvement.** We set environmental objectives and monitor their achievement. The policy is reviewed annually as part of the review of the operating environment after the financial statements have been completed.

The managing director is responsible for the implementation of this policy. The policy is available to all personnel and interested parties.

Raahe, 1 November 2026

Marko Rinkinen
Managing Director
